

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 1 of 40

Topic: SUM Function

Definition: SUM Function is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 1: Calculate total sales.

Input

A2:A10

Program

```
=SUM(A2:A10)
```

Output

Sum of A2:A10

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 2 of 40

Topic: AVERAGE Function

Definition: AVERAGE Function is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 2: Calculate average sales.

Input

A2:A10

Program

```
=AVERAGE(A2:A10)
```

Output

Average of A2:A10

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 3 of 40

Topic: MAX Function

Definition: MAX Function is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 3: Find the highest value.

Input

A2:A10

Program

```
=MAX(A2:A10)
```

Output

Largest value

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 4 of 40

Topic: MIN Function

Definition: MIN Function is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 4: Find the lowest value.

Input

A2:A10

Program

```
=MIN(A2:A10)
```

Output

Smallest value

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 5 of 40

Topic: COUNT Function

Definition: COUNT Function is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 5: Count numeric cells.

Input

A2:A10

Program

```
=COUNT(A2:A10)
```

Output

Number of numeric cells

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 6 of 40

Topic: COUNTA Function

Definition: COUNTA Function is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 6: Count non-empty cells.

Input

A2:A10

Program

```
=COUNTA(A2:A10)
```

Output

Number of non-empty cells

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 7 of 40

Topic: COUNTIF Function

Definition: COUNTIF Function is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 7: Count values meeting a condition.

Input

A2:A10 > 100

Program

```
=COUNTIF(A2:A10, ">100")
```

Output

Count above 100

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 8 of 40

Topic: SUMIF Function

Definition: SUMIF Function is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 8: Sum values meeting a condition.

Input

A2:A10 where B='East '

Program

```
=SUMIF(B2:B10, "East", A2:A10)
```

Output

East-region total

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 9 of 40

Topic: AVERAGEIF Function

Definition: AVERAGEIF Function is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 9: Calculate conditional average.

Input

A2:A10 where B='East '

Program

```
=AVERAGEIF(B2:B10, "East", A2:A10)
```

Output

East-region average

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 10 of 40

Topic: IF Function

Definition: IF Function is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 10: Use IF for pass/fail.

Input

Marks in A2

Program

```
=IF(A2>=40, "Pass", "Fail")
```

Output

Pass or Fail

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 11 of 40

Topic: IF Function

Definition: IF Function is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 11: Use nested IF for grades.

Input

Marks in A2

Program

```
=IF(A2>=90, "A", IF(A2>=60, "B", "C"))
```

Output

Grade

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 12 of 40

Topic: AND Function

Definition: AND Function is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 12: Use AND.

Input

A2=80, B2=90

Program

=AND(A2>=40, B2>=40)

Output

TRUE

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 13 of 40

Topic: OR Function

Definition: OR Function is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 13: Use OR.

Input

A2=80, B2=30

Program

```
=OR(A2>=40, B2>=40)
```

Output

TRUE

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 14 of 40

Topic: Text Concatenation

Definition: Text Concatenation is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 14: Join text values.

Input

A2= 'Pavan ', B2= 'Reddy '

Program

=A2&" "&B2

Output

Pavan Reddy

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 15 of 40

Topic: LEFT Function

Definition: LEFT Function is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 15: Extract left characters.

Input

A2= 'Python '

Program

=LEFT(A2,3)

Output

Pyt

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 16 of 40

Topic: RIGHT Function

Definition: RIGHT Function is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 16: Extract right characters.

Input

A2= 'Python '

Program

=RIGHT(A2,3)

Output

hon

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 17 of 40

Topic: MID Function

Definition: MID Function is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 17: Extract middle characters.

Input

A2= 'Python '

Program

=MID(A2, 2, 3)

Output

yth

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 18 of 40

Topic: LEN Function

Definition: LEN Function is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 18: Find text length.

Input

A2= 'Python '

Program

=LEN(A2)

Output

6

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 19 of 40

Topic: TRIM Function

Definition: TRIM Function is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 19: Remove extra spaces.

Input

A2 has extra spaces

Program

```
=TRIM(A2)
```

Output

Cleaned text

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 20 of 40

Topic: UPPER Function

Definition: UPPER Function is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 20: Convert text to uppercase.

Input

A2= 'python '

Program

=UPPER(A2)

Output

PYTHON

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 21 of 40

Topic: LOWER Function

Definition: LOWER Function is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 21: Convert text to lowercase.

Input

```
A2= ' PYTHON '
```

Program

```
=LOWER(A2)
```

Output

```
python
```

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 22 of 40

Topic: XLOOKUP Function

Definition: XLOOKUP Function is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 22: Find a value with XLOOKUP.

Input

ID in E2; lookup table A:B

Program

```
=XLOOKUP(E2,A2:A10,B2:B10,"Not Found")
```

Output

Matching value

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 23 of 40

Topic: VLOOKUP Function

Definition: VLOOKUP Function is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 23: Find a value with VLOOKUP.

Input

ID in E2; table A:B

Program

```
=VLOOKUP(E2,A2:B10,2,FALSE)
```

Output

Matching value

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 24 of 40

Topic: AND Function

Definition: AND Function is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 24: Handle lookup errors.

Input

Lookup formula

Program

```
=IFERROR(XLOOKUP(E2,A2:A10,B2:B10),"Not Found")
```

Output

Not Found if missing

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 25 of 40

Topic: Percentage Calculation

Definition: Percentage Calculation is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 25: Calculate percentage.

Input

Sales A2, target B2

Program

=A2/B2

Output

Percentage

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 26 of 40

Topic: Percentage Change

Definition: Percentage Change is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 26: Calculate percentage change.

Input

Old A2, New B2

Program

```
=(B2-A2)/A2
```

Output

Percentage change

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 27 of 40

Topic: ROUND Function

Definition: ROUND Function is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 27: Round a value.

Input

12.567

Program

```
=ROUND(A2,2)
```

Output

12.57

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 28 of 40

Topic: RANK Function

Definition: RANK Function is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 28: Rank a value.

Input

Scores A2:A10

Program

```
=RANK.EQ(A2,A2:A10,0)
```

Output

Rank

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 29 of 40

Topic: Duplicate Detection

Definition: Duplicate Detection is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 29: Find duplicate values.

Input

IDs A2:A10

Program

```
=COUNTIF($A$2:$A$10,A2)>1
```

Output

TRUE for duplicates

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 30 of 40

Topic: OR Function

Definition: OR Function is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 30: Conditional formatting rule.

Input

A2:A10

Program

=A2>100

Output

Highlights values above 100

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 31 of 40

Topic: Running Total

Definition: Running Total is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 31: Create a running total.

Input

Sales A2:A10

Program

```
=SUM($A$2:A2)
```

Output

Running total

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 32 of 40

Topic: Date Difference

Definition: Date Difference is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 32: Calculate date difference.

Input

Start A2, End B2

Program

=B2-A2

Output

Number of days

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 33 of 40

Topic: YEAR Function

Definition: YEAR Function is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 33: Extract year from date.

Input

A2 is a date

Program

```
=YEAR(A2)
```

Output

Year

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 34 of 40

Topic: MONTH Function

Definition: MONTH Function is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 34: Extract month from date.

Input

A2 is a date

Program

```
=MONTH(A2)
```

Output

Month number

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 35 of 40

Topic: Weekday Extraction

Definition: Weekday Extraction is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 35: Extract weekday name.

Input

A2 is a date

Program

```
=TEXT(A2, "dddd")
```

Output

Weekday

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 36 of 40

Topic: PivotTable Summary

Definition: PivotTable Summary is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 36: Create a PivotTable summary.

Input

Sales data table

Program

Insert PivotTable → Rows: Region → Values: Sum of Sales

Output

Sales by region

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 37 of 40

Topic: Chart Creation

Definition: Chart Creation is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 37: Create a chart.

Input

Monthly sales table

Program

Insert → Column Chart

Output

Column chart

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 38 of 40

Topic: Remove Duplicates

Definition: Remove Duplicates is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 38: Remove duplicate rows.

Input

Customer table

Program

Data → Remove Duplicates

Output

Unique rows

TOP 40 EXCEL INTERVIEW QUESTIONS

Question 39 of 40

Topic: Text to Columns

Definition: Text to Columns is an Excel feature or function used to work with spreadsheet data. It helps calculate, analyze, organize, or present information efficiently.

Question 39: Split text into columns.

Input

Full name in A2

Program

Data → Text to Columns

Output

Separate columns
