

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 1 of 40

Topic: Calculated Column

Definition: Calculated Column is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 1: Create a calculated column for total sales.

Input

Quantity and UnitPrice

Program

```
Total Sales = Sales[Quantity] * Sales[UnitPrice]
```

Output

Total Sales column

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 2 of 40

Topic: Total Sales Measure

Definition: Total Sales Measure is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 2: Create a measure for total sales.

Input

```
Sales[Amount]
```

Program

```
Total Sales = SUM(Sales[Amount])
```

Output

```
Total sales measure
```

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 3 of 40

Topic: Average Sales Measure

Definition: Average Sales Measure is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 3: Calculate average sales.

Input

```
Sales[Amount]
```

Program

```
Average Sales = AVERAGE(Sales[Amount])
```

Output

```
Average sales
```

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 4 of 40

Topic: Customer Count

Definition: Customer Count is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 4: Count customers.

Input

```
Customer[CustomerID]
```

Program

```
Customer Count = DISTINCTCOUNT(Customer[CustomerID])
```

Output

```
Unique customer count
```

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 5 of 40

Topic: Year-to-Date Sales

Definition: Year-to-Date Sales is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 5: Calculate year-to-date sales.

Input

Date and Sales tables

Program

```
Sales YTD = TOTALYTD([Total Sales], 'Date'[Date])
```

Output

YTD sales

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 6 of 40

Topic: Previous Year Sales

Definition: Previous Year Sales is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 6: Calculate previous year sales.

Input

Date and Sales tables

Program

```
PY Sales = CALCULATE([Total Sales],  
SAMEPERIODLASTYEAR('Date'[Date]))
```

Output

Previous-year sales

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 7 of 40

Topic: Year-over-Year Growth

Definition: Year-over-Year Growth is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 7: Calculate year-over-year growth.

Input

Current and previous sales

Program

```
YoY % = DIVIDE([Total Sales] - [PY Sales], [PY Sales])
```

Output

YoY percentage

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 8 of 40

Topic: Running Total

Definition: Running Total is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 8: Calculate running total.

Input

Date and Sales

Program

```
Running Sales = CALCULATE([Total Sales],  
FILTER(ALL('Date'[Date]), 'Date'[Date] <= MAX('Date'[Date])))
```

Output

Running total

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 9 of 40

Topic: Profit Measure

Definition: Profit Measure is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 9: Create a profit measure.

Input

Sales and Cost

Program

$\text{Profit} = [\text{Total Sales}] - [\text{Total Cost}]$

Output

Profit

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 10 of 40

Topic: Profit Margin

Definition: Profit Margin is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 10: Calculate profit margin.

Input

Profit and Sales

Program

Profit Margin = `DIVIDE`([Profit], [Total Sales])

Output

Profit margin

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 11 of 40

Topic: CALCULATE with Filter

Definition: CALCULATE with Filter is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 11: Use CALCULATE with a filter.

Input

Sales for East

Program

```
East Sales = CALCULATE([Total Sales], Sales[Region] = "East")
```

Output

East sales

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 12 of 40

Topic: Distinct Product Count

Definition: Distinct Product Count is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 12: Create a distinct product count.

Input

```
Product[ProductID]
```

Program

```
Product Count = DISTINCTCOUNT(Product[ProductID])
```

Output

```
Unique product count
```

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 13 of 40

Topic: Top Product by Sales

Definition: Top Product by Sales is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 13: Find top product by sales.

Input

Product and Sales

Program

```
Top Product = TOPN(1, VALUES(Product[ProductName]), [Total  
Sales], DESC)
```

Output

Top product

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 14 of 40

Topic: Date Table

Definition: Date Table is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 14: Create a date table.

Input

Date range

Program

```
Date = CALENDAR(DATE(2025,1,1), DATE(2026,12,31))
```

Output

Date table

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 15 of 40

Topic: Year in DAX

Definition: Year in DAX is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 15: Extract year in DAX.

Input

```
Date[Date]
```

Program

```
Year = YEAR('Date'[Date])
```

Output

```
Year
```

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 16 of 40

Topic: Month Name in DAX

Definition: Month Name in DAX is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 16: Extract month name.

Input

```
Date[Date]
```

Program

```
Month = FORMAT('Date'[Date], "MMMM")
```

Output

```
Month name
```

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 17 of 40

Topic: Quarter in DAX

Definition: Quarter in DAX is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 17: Create quarter.

Input

```
Date[Date]
```

Program

```
Quarter = "Q" & FORMAT('Date'[Date], "Q")
```

Output

```
Quarter
```

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 18 of 40

Topic: Table Relationship

Definition: Table Relationship is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 18: Create a relationship.

Input

CustomerID in two tables

Program

Model view → connect Customer[CustomerID] to Sales[CustomerID]

Output

Relationship created

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 19 of 40

Topic: One-to-Many Relationship

Definition: One-to-Many Relationship is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 19: Create a one-to-many relationship.

Input

Customer and Sales

Program

```
Customer[CustomerID] 1 → * Sales[CustomerID]
```

Output

One-to-many relationship

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 20 of 40

Topic: Visual-level Filter

Definition: Visual-level Filter is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 20: Filter a visual by region.

Input

Region field

Program

Add Region to the visual **Filters** pane

Output

Visual filtered by region

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 21 of 40

Topic: Card Visual

Definition: Card Visual is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 21: Create a card visual.

Input

Total Sales measure

Program

Insert Card → add [Total Sales]

Output

Sales KPI card

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 22 of 40

Topic: Bar Chart

Definition: Bar Chart is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 22: Create a bar chart.

Input

Region and Total Sales

Program

Insert Bar Chart → Axis: Region → **Values:** Total Sales

Output

Sales by region

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 23 of 40

Topic: Line Chart

Definition: Line Chart is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 23: Create a line chart.

Input

Date and Total Sales

Program

Insert Line Chart → X-axis: **Date** → Y-axis: Total Sales

Output

Sales trend

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 24 of 40

Topic: Slicer

Definition: Slicer is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 24: Create a slicer.

Input

Region field

Program

Insert Slicer → add Region

Output

Interactive region filter

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 25 of 40

Topic: Matrix Visual

Definition: Matrix Visual is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 25: Create a matrix.

Input

Region, Product, Sales

Program

Insert Matrix → Rows: Region → Columns: Product → **Values:** Total Sales

Output

Matrix summary

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 26 of 40

Topic: Conditional Formatting

Definition: Conditional Formatting is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 26: Create conditional formatting.

Input

Profit values

Program

Format → Conditional formatting → Data bars

Output

Formatted profit values

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 27 of 40

Topic: Tooltip Page

Definition: Tooltip Page is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 27: Create a tooltip page.

Input

Sales visual

Program

New page → Page information → Tooltip = On

Output

Tooltip page

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 28 of 40

Topic: Drill Down

Definition: Drill Down is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 28: Drill down by hierarchy.

Input

Year → Quarter → Month

Program

Add hierarchy to axis and enable Drill Down

Output

Hierarchy drill-down

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 29 of 40

Topic: Bookmark

Definition: Bookmark is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 29: Create a bookmark.

Input

Current report view

Program

View → Bookmarks → Add

Output

Saved report state

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 30 of 40

Topic: Button Navigation

Definition: Button Navigation is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 30: Create a button navigation.

Input

Pages

Program

Insert Button → Action → Page navigation

Output

Navigation button

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 31 of 40

Topic: Power Query Duplicate Removal

Definition: Power Query Duplicate Removal is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 31: Use Power Query to remove duplicates.

Input

Source table

Program

Transform Data → Remove Rows → Remove Duplicates

Output

Duplicate rows removed

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 32 of 40

Topic: Power Query Data Types

Definition: Power Query Data Types is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 32: Change data type in Power Query.

Input

Date text column

Program

Transform → Data Type → [Date](#)

Output

Date type applied

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 33 of 40

Topic: Power Query Replace Values

Definition: Power Query Replace Values is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 33: Replace values in Power Query.

Input

'N/A' to 0

Program

Transform → Replace **Values**

Output

Values replaced

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 34 of 40

Topic: Power Query Split Column

Definition: Power Query Split Column is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 34: Split a column in Power Query.

Input

Full Name

Program

Transform → Split Column → By Delimiter

Output

Separate columns

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 35 of 40

Topic: Merge Queries

Definition: Merge Queries is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 35: Merge queries.

Input

Customers and Orders

Program

Power Query → Merge Queries → CustomerID

Output

Merged query

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 36 of 40

Topic: Append Queries

Definition: Append Queries is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 36: Append queries.

Input

January and February tables

Program

Power Query → Append Queries

Output

Rows appended

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 37 of 40

Topic: Conditional Column

Definition: Conditional Column is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 37: Create a conditional column.

Input

Sales amount

Program

Add Column → Conditional Column

Output

Category column

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 38 of 40

Topic: Dataset Refresh

Definition: Dataset Refresh is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 38: Refresh the dataset.

Input

Connected report

Program

Home → Refresh

Output

Latest data loaded

TOP 40 POWER BI INTERVIEW QUESTIONS

Question 39 of 40

Topic: Report Publishing

Definition: Report Publishing is a Power BI feature or DAX/Power Query technique used for data modeling and analysis. It helps create calculations, transformations, or interactive report elements.

Question 39: Publish a report.

Input

Completed PBIX

Program

Home → Publish

Output

Report published to workspace
